

# Protect your yield

Trap flying pests naturally.

- **Eco-friendly & chemical-free**
- **Easy to use in greenhouses & open fields**
- **Continuous monitoring & control of pests**
- **Affordable sizes for smallholders and commercial farmers**

**Bioenemy Sticky Cards**

**The Natural Way to Trap Pests**

## Available Products

- Biosticky card 10X25cm (Blue & Yellow)
- Biosticky card 15X25cm (Blue & Yellow)
- Biosticky card 20X25cm (Blue & yellow)
- BioRoller Trap 15cm X 100 m

## How it works

**Sticky Cards:** Sticky cards are brightly colored adhesive traps (commonly yellow and blue) used to monitor and reduce populations of flying insect pests such as whiteflies, aphids, thrips, leafminers, and fungus gnats. They work by visually attracting pests with their color and trapping them on the sticky surface. Their importance lies in offering farmers an eco-friendly, chemical-free tool for early pest detection, population monitoring, and mass trapping—helping reduce pesticide sprays, delay resistance development, and protect beneficial insects.

**Sticky Rolls:** Roller traps are large, movable sticky sheets or films stretched along crop rows or greenhouse sections to intercept flying pests on a wider scale. Unlike small cards, roller traps cover a bigger surface area, making them especially effective for large-scale suppression of pests like whiteflies and thrips in high-infestation environments. Their importance is in providing continuous, large-area pest control, lowering pest migration between rows, reducing reliance on chemical sprays, and improving overall crop health and yield protection.

## Directions for use

### **Sticky Cards**

- Hang in sheltered crop canopy locations.
- Use 20–40 cards per hectare (increase in high pest pressure).
- Position near fruiting zones and pest hotspots.
- Replace when saturated.

### **Sticky Rolls**

- Stretch rolls horizontally across crop rows or greenhouse sides.
- Place 1–1.5 m above ground to intercept flying insects.
- Secure ends firmly to posts or supports.
- Replace when saturated.

**Disposal:** Responsibly dispose of used traps.

**Stick. Catch. Protect your harvest -- Fits every farm and crop**
